Tradition and Innovation in Balance

Etsuro Gin-Nezu (Silver Gray) is the newest addition to the Etsuro series. Positioned as an accessible model within the current lineup, it inherits the design philosophy and manufacturing standards of the series.

"Gin-nezu," a traditional Japanese color, represents quiet strength and refined elegance. Its subtle silver-gray tone reflects the model's emphasis on balance, stability, and understated presence.

Featuring a low-impedance design ($5\Omega/0.4\text{mV}$), Gin-Nezu offers strong compatibility with step-up transformers and MC head amplifiers, supporting stable system integration.

For the first time in the series, a boron cantilever is adopted for its high rigidity and fast response characteristics. Combined with an $80\mu\text{m}$ Microline diamond stylus, it enables precise groove tracing.

The housing is crafted from aircraft-grade extra-super duralumin, combining advanced materials with traditional Japanese manufacturing techniques.

Etsuro Gin-Nezu represents a synthesis of advanced precision engineering and refined craftsmanship within the Etsuro lineup.

Specifications

Type	Moving coil
Frequency response	15-50,000Hz
Output voltage	0.4mV/1kHz
Output balance	<0.5dB/1kHz
Channel separation	30dB/1kHz
Tracking weight	2gr
Impedance	$5\Omega/1\text{kHz}$
Trackability	$70\mu\text{m}/2\text{gr}$
Stylus shape	$80\mu\text{m}$ microline diamond
Cantilever	0.28ϕ Boron
Cartridge base	Extra super duralumin(A7075)
Cartridge housing	Extra super duralumin(A7075)
Cartridge weight	8.1gr
